No More Wasting Time Finding Coupons At Checkout

Online shopping has replaced traditional shopping. The user needs to know methods of availing their favorite product online using intellectual methods.

E-commerce sites provide various exciting offers and deals. This has multiplied the number of users of these said websites. As new E-commerce sites are emerging day by day and the online shopping business gets comprehensive and competitive. It is essential for these entrepreneurs to evolve and imbibe new, attractive solutions to get registered in the customer's mind firmly.

Automatic coupon code finder is an excellent invention which has gained commendable appreciation from the online users.

Occasionally these E-commerce sites release **coupon codes to incentivize the offers**

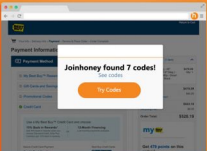

Previously these users **used to search the coupon codes on Google and manually enter it in the Shopping website** to grab the coupons at checkout offer.

People **used to spend hours** on end searching for codes, hoping to get coupons on checkout, but at last, they gave up knowing that they would never find an actual, "working" coupon. **This diminishes the shopper's interest.**

Joinhoney.com is an instant coupon at checkout extension that helps to save some cash. It works like instant charm magic.

It helps save the time spent in finding a coupon code, as the **Extension has software** specifically to find coupon codes to buy stuff for cheap, without investing any of your personal time.

How the saving magic works?

The coupons at checkout finders are an add-on extension that is supposed to be installed on the laptop or desktop browser.

- The Coupon at Checkout extension is a browser add-on. Just download the joinhoney extension from the Google search engine and click on the button that says "Add to Chrome", and you will have "The extension" with the extension gets automatically printed to the browser.
- Once installed, it is available for all the online shopping sites which are registered with either the extension, like the retailers. It adds a "Find Savings" button to the checkout page in the store it supports. You are now ready to do your offline shopping and save a lot of money.
- There are more than one deal available for a product. When the user shops a product before the checkout or the payment all you need to do is click on "Find best deals" option. The internal software program works, and the extension scans and performs detection of coupon codes. It shows the total number of codes available for the product, and it lists the best of all the codes automatically in the Promo Code list box.

After the verification is done, it shows the saved amount and finally discounts it with the total selling price. All of these happens automatically with just a mouse click.

On every use of the app, some points get added. Users can redeem it by logging in using their credentials and get an **Amazon gift card** or some other vouchers which the user can benefit based on their own interest.

All that the users have to do is activate "cash bonus" before checking out.

How does the coupon at checkout program work?

Every time a product is bought from any online shopping site using this app, a percentage of the amount is paid as a commission to the **Joinhoney.com** company and finally a portion of it is added to the user's account as a cash bonus.
